Class Schedule

Our classes are currently scheduled for Fridays from 6:00 p.m. to 8:00 p.m. In addition, we have "TeamHour" every Tuesday from 6:00 p.m. to 7:00 p.m. for teams to connect, solve problems, and support each other. If you cannot attend a class, you must post a descriptive message in the "General group" explaining your absence. Missing two classes without submitting assignments or notifying the group will lead to immediate removal, ensuring everyone progresses together. The sessions involve practical work, including live coding, assignments, tests, and exams. Active participation is essential for both your development and the group's success.

About our community groups

The "Announcement" group is for official updates. The "General" group allows for discussions and questions among colleagues regarding assignments or projects. The "Assignment Question" group contains all relevant questions and tutorials, while the "Submit Assignment" group is for submitting Assignments, assessments, tests, and exams.

Additionally, there is a "Warning Zone," group which issues warnings prior to execution, and a "Project Tasks" group for real-world work projects.

Our advanced groups

Frontend Devs | Backend Devs | Full-Stack Devs | Interview Preparation | Certificate Collection

NOTE:

(1) Only submit assignments, tests, and exams as PDF documents or other document formats, not as plain WhatsApp messages. Projects must be submitted from GitHub by pushing your code and sharing the repository link.
(2) The "Submit Assessment" group is open only on Fridays during class hours for submitting assignments and closes immediately at 12 a.m.; everyone is advised to submit before the group closes for the week.
(3) If assignments are not submitted by the deadline and the group is closed for the week, they will no longer be considered valuable, and focus must shift to new assignments.

NOTE:

Your assignments, tests, and exams are essential for tracking your progress before advancing to more advanced groups. If you do not achieve enough points, your teammates may move ahead while you will need to stay back for at least two more weeks to retake all assignments, tests, and exams to ensure you are ready for the next stage. This is necessary because the next stage involves more intensive work with real-life applications, including access to our live codebase, which cannot be granted if you do not pass your assessments.
In the advanced classes, we will hold regular meetings to review code, maintain momentum, and ensure continuous improvement. We're here to support your growth and success, one step at a time. Welcome aboard, and let's make this journey meaningful!
